**Respiratory protection:** Not required

**Hand protection:** Due to lack of tests, no recommendation can be made on glove material for the product/preparation/mixture of chemicals. The glove material must be impermeable and resistant to the product/substance/preparation. Selection of glove material considering breakthrough times, permeation rates and degradation.

**Glove material:** nitrile or latex

Short-term contact (Level 2: < 30 min): Disposable protective gloves of category III according to EN374, e.g. material nitrile, layer thickness 0.1 mm)

Long-term contact (level 6: < 480 min): Protective gloves of category III according to EN374, e.g. Material nitrile, layer thickness 0.7 mm

When handling chemical substances, only chemical protective gloves with a CE mark including a four-digit test number may be worn. The choice of a glove is not only dependent on the material, but also on other quality features and varies from manufacturer to manufacturer. Since the product preparation of several substances, the resistance of glove materials cannot be predicted. The resistance of glove materials cannot be calculated in advance and must therefore be checked before use.

**Penetration time of the glove material:** The exact penetration time must be obtained from the manufacturer of the protective gloves and must be observed.

**Eye protection:** Safety goggles (tightly fitting, according to DIN EN 166) are recommended.
